Document the IPv6 addressing scheme in the Addressing Table. Subnet address : AND result of subnet mask and the given IP address3. Number of subnets : Given bits for mask ¢ÃÂÂ No. of bits in default mask2. Verify the addressing configured by issuing the following command: R1# show ipv6 interface brief c. Click Engineering and then select the Desktop tab followed by IP Configuration. The network will use a series of consecutive IPv6 subnets for four LANs. Your job is to assign the subnets to the LANs and configure the routers and PCs with IPv6 addressing. Your final step is to verify connectivity between IPv6 hosts. Enter privileged EXEC mode. First Host ID : Subnet address + 1 (adding one to the binary representation of the subnet address)6. Enter the ipv6 unicast-routing global configuration command. Example: R1(config-if)# no ipv6 address 2001:db8:1:5::1/64 d. Activate the interface. Click Web Browser. ASSESS THE FIRST IPV6 addresses to R2 for the two LAN. Assign the second IPV6 address for the WAN connection. Step 5: Check the IPV6 address on R1. Set the IPV6 address to 2001: DB8: 1: 1 :: 4 with a prefix of /64. Each should therefore automatically receive complete IPV6 addresses from routers. Response note: red color or gray color highlights indicating the text that appears in the copy of response only. Configure the IPV6 Link-Local address with the following command: R1 (Config-IF)# IPV6 Address Fe80 :: 1 Link-Local d. Repeat the 2a steps through 2C for design. Configure the CAD server with the addresses as it was done in the passage 1. At this point in your studies, you just have to know how to configure the IPV6 address on an interface. In addition, for the first subnet block, find the subnet address. Solution: This is a class B. Subnet Table Subnet address Description Subnet address R1 G0/0 LAN 2001: DB8: ACAD: 00C8 :: 0/64 R1 G0/1 LAN 2001: DB8: ACAD: 00C9 :: 0/ 64 R2 G0/0 LAN 2001: DB8: ACAD: 00ca :: 0/64 R2 G0/1 LAN 2001: DB8: ACAD: 00CB :: 0/64 WAN LINK 2001: DB8: AC64CC: Pass 2: assign the address IPV6 for routers. Note: To make a modification of the address with IPV6, it is necessary to remove the incorrect address or the correct address that the wrong address will remain configured on the interface. Note: This network is already configured some IPv6 commands that are covered in a later course. Enter 2001:db8:1:1::4 in the URL box and click Go. The Accounting website should appear. R1(config-if)# no shutdown Step 3: Configure IPv6 addressing on GigabitEthernet0/1. We give the IP address and define the number of bits for mask along with it (usually followed by a ¢ÃÂÂ/¢ÃÂÂ symbol), like, 192.168.1.1/28. R1(config)# ipv6 unicast-routing Step 2: Configure IPv6 addressing on GigabitEthernet0/0. Part 3: Configure IPv6 Addressing on the Clients Step 1: Configure IPv6 addressing on the Sales and Billing Clients. Press Enter. Click Accounting and click the Desktop tab > IP Configuration. Click Billing and then select the Desktop tab followed by IP Configuration. b. Exit configuration mode on R1. R1.
